

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	29 September 2026
Team ID	SWTID-2026-8776
Project Name	AI WeatherWiseAPI
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Team:

- Sairunisha S M – Team Leader
- Swetha R
- Lokeshwari P
- Yuvashri R

Selected Problem:

How can we provide real-time weather information along with personalized AI-based recommendations through a secure and scalable API?

Problem Statement:

People often rely on multiple weather applications to understand current weather conditions, but raw weather information such as temperature, humidity, wind speed, and weather conditions may not provide personalized guidance. There is a need for a secure API-based system that combines real-time weather data with AI-generated summaries and recommendations.

Step-2: Brainstorm, Idea Listing and Grouping

Category	Brainstormed Ideas
Weather Services	Real-time weather data, temperature, humidity, wind speed, weather conditions
AI Features	AI weather summary, clothing recommendations, outdoor activity suggestions, travel suggestions, safety precautions
User Management	User registration, login, secure authentication, profile management
Location Management	Save favorite cities, view saved locations, update locations, delete locations
Security	JWT authentication, bcrypt password hashing, protected API routes
Technology	Node.js, Express.js, MongoDB, Mongoose, Gemini AI, OpenWeather API
API Features	RESTful APIs, JSON responses, CRUD operations, API testing
Future Possibilities	Weather alerts, forecast history, multilingual recommendations, mobile/web frontend

Step-3: Idea Prioritization

Idea	User Value	Technical Feasibility	Priority
Real-time Weather Data	High	High	High
AI Weather Summary	High	High	High
AI Weather Recommendations	High	High	High
User Authentication	High	High	High
Favorite Location Management	High	High	High
Weather Alerts	High	Medium	Medium
Weather History	Medium	Medium	Medium
Multilingual AI Recommendations	Medium	Medium	Medium
Mobile Application	High	Low/Medium	Future
Advanced Weather Prediction	High	Low	Future
