Project Overview:

Project Name: AI WeatherWise API

Project Description: AI WeatherWise API is a secure RESTful backend application developed using Node.js, Express.js, MongoDB, OpenWeather API, and Google Gemini AI. The system provides real-time weather information, AI-generated weather summaries, personalized recommendations, and favorite-location management with JWT-based authentication.

Project Version: 1.0

Testing Period: 23 September 2026 to 25 September 2026

Testing Scope:

List Features and Functionalities Tested

- User Registration
- User Login
- JWT Authentication
- View Profile
- Save Favorite Location
- View Favorite Locations
- Delete Favorite Location
- Real-Time Weather Retrieval
- AI Weather Summary Generation
- AI Recommendation Generation

User Stories or Requirements Tested

- Secure user authentication
- Weather information retrieval
- Personalized AI insights
- Location management
- API response validation

Testing Environment:URL/Location: <http://localhost:5001>

Database: MongoDB

API Testing Tool: Thunder Client / Postman

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	1. Open Register API 2. Enter Name, Email, Password 3. Submit Request	User account created successfully and JWT token generated	User registered successfully	Pass
TC-002	User Login	1. Open Login API 2. Enter valid credentials 3. Submit Request	User logged in and JWT token returned	Login successful	Pass
TC-003	Invalid Login	1. Enter incorrect password 2. Submit Request	Error message displayed	Correct error returned	Pass
TC-004	View Profile	1. Login 2. Use JWT Token 3. Access Profile API	User profile displayed	Profile retrieved successfully	Pass
TC-005	Save Favorite Location	1. Login 2. Enter city and country 3. Save location	Location stored in database	Location saved successfully	Pass
TC-006	View Favorite Locations	1. Login 2. Access Location API	All saved locations displayed	Locations retrieved successfully	Pass
TC-007	Delete Favorite Location	1. Select saved location 2. Delete Request	Location removed successfully	Location deleted successfully	Pass
TC-008	Fetch Weather Data	1. Enter city name 2. Call Weather API	Current weather details returned	Weather data retrieved	Pass
TC-009	Generate AI Weather Summary	1. Request weather summary 2. Send weather metrics to Gemini AI	Human-readable weather summary generated	Summary generated successfully	Pass
TC-010	Generate AI Recommendations	1. Request recommendations 2. Send weather data to Gemini AI	Personalized recommendations returned	Recommendations generated successfully	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	Invalid city name returns external API error message	1. Enter invalid city 2. Call Weather API	Low	Closed	Improved error handling added
BG-002	Empty request fields accepted during initial testing	1. Submit empty fields 2. Send request	Medium	Closed	Validation rules implemented
BG-003	Expired JWT token not handled clearly	1. Use expired token 2. Access protected route	Low	Closed	Custom token expiration message added

**Notes:**

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
